Scan Report

January 26, 2026

Summary

This document reports on the results of an automatic security scan. All dates are displayed using the timezone "Coordinated Universal Time", which is abbreviated "UTC". The task was " hgdfdghgdgd". The scan started at Mon Jan 26 01:47:47 2026 UTC and ended at Mon Jan 26 14:04:13 2026 UTC. The report first summarises the results found. Then, for each host, the report describes every issue found. Please consider the advice given in each description, in order to rectify the issue.

Contents

1 Result Overview **2**

2 Results per Host **2**

2.1 172.31.1.90 2

2.1.1 High 8080/tcp 2

2.1.2 Medium 8080/tcp 32

2.1.3 Low 8080/tcp 59

2.1.4 Low general/icmp 60

2.1.5 Low general/tcp 61

2.1.6 Log 8080/tcp 62

2.1.7 Log general/tcp 68

2.1.8 Log general/CPE-T 71

1 Result Overview

Host	Critical	High	Medium	Low	Log	False P.
172.31.1.90 adminer42.trabalho_vulnnet	0	22	21	3	13	0
Total: 1	0	22	21	3	13	0

Vendor security updates are not trusted.
Overrides are off. Even when a result has an override, this report uses the actual threat of the result.
Information on overrides is included in the report.
Notes are included in the report.
This report might not show details of all issues that were found.
Issues with the threat level "Critical" are not shown.
Issues with the threat level "Debug" are not shown.

This report contains all 59 results selected by the filtering described above. Before filtering there were 5586 results.

2 Results per Host

2.1 172.31.1.90

Host scan start	Mon Jan 26 05:15:01 2026 UTC
Host scan end	Mon Jan 26 07:00:07 2026 UTC

Service (Port)	Threat Level
8080/tcp	High
8080/tcp	Medium
8080/tcp	Low
general/icmp	Low
general/tcp	Low
8080/tcp	Log
general/tcp	Log
general/CPE-T	Log

2.1.1 High 8080/tcp

High (CVSS: 7.5)
NVT: Adminer 1.12.0 - 4.6.2 Information Disclosure Vulnerability

Summary
Adminer is prone to an information disclosure vulnerability.

. . . continues on next page . . .

. . . continued from previous page . . .

Quality of Detection (QoD): 80%

Vulnerability Detection Result

```
Installed version: 4.2.5
Fixed version:     4.6.3
Installation
path / port:       /
```

Solution:
Solution type: VendorFix
Update to version 4.6.3 or later.

Affected Software/OS
Adminer version 1.12.0 through 4.6.2.

Vulnerability Insight
Adminer allows an attacker to read arbitrary files on the remote server by requesting Adminer to connect to a remote MySQL database.

Vulnerability Detection Method
Checks if a vulnerable version is present on the target host.
Details: `Adminer 1.12.0 - 4.6.2 Information Disclosure Vulnerability`
OID:1.3.6.1.4.1.25623.1.0.124056
Version used: `2025-08-28T05:39:05Z`

References

```

```

High (CVSS: 7.8)
NVT: Adminer <= 4.8.1 DoS Vulnerability

Summary
Adminer is prone to a denial of service (DoS) vulnerability.

Quality of Detection (QoD): 80%

Vulnerability Detection Result

```
Installed version: 4.2.5
Fixed version:     4.8.2
Installation
```

. . . continues on next page . . .

. . . continued from previous page . . .

path / port: /

Impact
Remote, unauthenticated attackers can trigger this by sending a malicious serialized object, which forces excessive memory usage, rendering Adminer's interface unresponsive and causing a server-level DoS. While the server may recover after several minutes, multiple simultaneous requests can cause a complete crash requiring manual intervention.

Solution:
Solution type: VendorFix
Update to version 4.8.2 or later.

Affected Software/OS
Adminer version 4.8.1 and prior.

Vulnerability Insight
When using Monolog for logging, Adminer allows a denial of service (memory consumption) via a crafted serialized payload (e.g., using s:1000000000), leading to a PHP Object Injection issue.

Vulnerability Detection Method
Checks if a vulnerable version is present on the target host.
Details: Adminer <= 4.8.1 DoS Vulnerability
OID:1.3.6.1.4.1.25623.1.0.155221
Version used: 2025-08-28T05:39:05Z

High (CVSS: 7.5)
NVT: PHP 'CVE-2017-7189' Improper Input Validation Vulnerability - Linux

Product detection result
cpe:/a:php:php:7.0.17
Detected by PHP Detection Consolidation (OID: 1.3.6.1.4.1.25623.1.0.171722)

Summary
PHP is improperly validating input from untrusted input.

Quality of Detection (QoD): 30%

Vulnerability Detection Result
Installed version: 7.0.17
Fixed version: None

. . . continues on next page . . .

. . . continued from previous page . . .

```
Installation
path / port:        8080/tcp
```

Solution:
Solution type: WillNotFix
No solution was made available by the vendor. General solution options are to upgrade to a newer release, disable respective features, remove the product or replace the product by another one.
Note: PHP versions 7.0.18 and 7.1.4 introduced a fix which was reverted again in version 7.0.19 / 7.1.5 respectively and the fix wasn't introduced again as of today (08-2020).

Affected Software/OS
All PHP versions since 4.3.0 up to the latest 7.x versions.
Note: PHP versions 7.0.18 and 7.1.4 introduced a fix which was reverted again in version 7.0.19 / 7.1.5 respectively.

Vulnerability Insight
main/streams/xp_socket.c in PHP misparses fsockopen calls, such as by interpreting fsockopen('127.0.0.1:80', 443) as if the address/port were 127.0.0.1:80:443, which is later truncated to 127.0.0.1:80. This behavior has a security risk if the explicitly provided port number (i.e., 443 in this example) is hardcoded into an application as a security policy, but the hostname argument (i.e., 127.0.0.1:80 in this example) is obtained from untrusted input.

Vulnerability Detection Method
Checks if a vulnerable version is present on the target host.
Details: `PHP 'CVE-2017-7189' Improper Input Validation Vulnerability - Linux`
OID:1.3.6.1.4.1.25623.1.0.108874

High (CVSS: 7.0)
NVT: PHP 5.3.7 - 7.3.31, 7.4.x < 7.4.25, 8.0.x < 8.0.12 Security Update (Oct 2021) - Linux

. . . continues on next page . . .

. . . continued from previous page . . .

Product detection result
cpe:/a:php:php:7.0.17
Detected by PHP Detection Consolidation (OID: 1.3.6.1.4.1.25623.1.0.171722)

Summary
PHP released new versions which includes a security fix.

Quality of Detection (QoD): 30%

Vulnerability Detection Result

```
Installed version: 7.0.17
Fixed version:     7.3.32 (not released yet)
Installation
path / port:       8080/tcp
```

Solution:
Solution type: VendorFix
Update to version 7.3.32 (not released yet), 7.4.25, 8.0.12 or later.

Affected Software/OS
PHP versions 5.3.7 through 7.3.31, 7.4.x through 7.4.24 and 8.0.x through 8.0.11.
Note: While the referenced CVE is only listing PHP 7.3.x, 7.4.x and 8.0.x as affected the security research team is stating in the linked blog post that all versions down to 5.3.7 are affected.

Vulnerability Insight
Fixed bug #81026 (PHP-FPM oob R/W in root process leading to privilege escalation).

Vulnerability Detection Method
Checks if a vulnerable version is present on the target host.
Details: PHP 5.3.7 - 7.3.31, 7.4.x < 7.4.25, 8.0.x < 8.0.12 Security Update (Oct 2021) -.

Product detection result

```
cpe:/a:php:php:7.0.17
Detected by PHP Detection Consolidation (OID: 1.3.6.1.4.1.25623.1.0.171722)
```

Summary

PHP is prone to multiple security vulnerabilities.

Quality of Detection (QoD): 30%

Vulnerability Detection Result

```
Installed version: 7.0.17
Fixed version:     7.0.33
Installation
path / port:       8080/tcp
```

Impact

Successful exploitation will allow remote attackers to execute remote code on the affected application/system and/or cause a cause a denial of service.

Solution:

Solution type: VendorFix

Update to version 5.6.39, 7.0.33, 7.1.25, 7.2.13, 7.3.0 or later.

. . . continues on next page . . .

. . . continued from previous page . . .

Affected Software/OS
PHP versions 5.6.x prior to 5.6.39, 7.0.x prior to 7.0.33, 7.1.x prior to 7.1.25 and 7.2.x prior to 7.2.13.

Vulnerability Insight
The following flaws exist:
- CVE-2018-19518: The imap_open functions which allows to run arbitrary shell commands via mailbox parameter.
- CVE-2018-20783: Heap Buffer Overflow in phar_parse_pharfile.
- CVE-2018-19396: ext/standard/var_unserializer.c allows attackers to cause a denial of service (application crash) via an unserialize call for the com, dotnet, or variant class.
- CVE-2018-19395: Denial of service because com and com_safearray_proxy return NULL in com_properties_get in ext/com_dotnet/com_handlers.c, as demonstrated by a serialize call on COM('WScript.Shell').

Vulnerability Detection Method
Checks if a vulnerable version is present on the target host.
Details: `PHP 5.6.x < 5.6.38, 7.x < 7.0.33, 7.1.x < 7.1.25, 7.2.x < 7.2.13 Multiple Vulne.`

cpe:/a:php:php:7.0.17
Detected by PHP Detection Consolidation (OID: 1.3.6.1.4.1.25623.1.0.171722)
```

Summary

PHP is prone to a denial of service (DoS) vulnerability.

Quality of Detection (QoD): 30%

Vulnerability Detection Result

```
Installed version: 7.0.17
Fixed version:     7.0.33
Installation
path / port:       8080/tcp
```

Impact

Successful exploitation will allow attackers to cause a denial of service of the affected application.

Solution:

Solution type: VendorFix

Update to version 5.6.39, 7.0.33, 7.1.26, 7.2.14, 7.3.0 or later.

Affected Software/OS

PHP versions 5.x prior to 5.6.39, 7.0.x prior to 7.0.33, 7.1.x prior to 7.1.26 and 7.2.x prior to 7.2.14.

Vulnerability Insight

A NULL pointer dereference and application crash via an empty string occurs in the message argument to the imap_mail function of ext/imap/php_imap.c.

Vulnerability Detection Method

Checks if a vulnerable version is present on the target host.

Details: `PHP 5.x < 5.6.39, 7.x < 7.0.33, 7.1.x < 7.1.26, 7.2.x < 7.2.14 DoS Vulnerabilit.`

High (CVSS: 7.4)
NVT: PHP 7.x < 7.0.18, 7.1.x < 7.1.4 SSRF Security Bypass Vulnerability - Linux

Product detection result
cpe:/a:php:php:7.0.17
Detected by PHP Detection Consolidation (OID: 1.3.6.1.4.1.25623.1.0.171722)

Summary
PHP is prone to a security bypass vulnerability.

Quality of Detection (QoD): 30%

Vulnerability Detection Result
Installed version: 7.0.17
Fixed version: 7.0.18
Installation
path / port: 8080/tcp

Impact
An attacker can exploit this issue to bypass security restrictions and perform unauthorized actions. This may aid in further attacks.

Solution:
Solution type: VendorFix

. . . continues on next page . . .

. . . continued from previous page . . .

Update to version 7.0.18, 7.1.4 or later.

Affected Software/OS
PHP versions 7.0.x prior to 7.0.18 and 7.1.x prior to 7.1.4.

Vulnerability Insight
The flaw exists due to the php_wddx_pop_element function in ext/wddx/wddx.c via an inapplicable class name in a wddxPacket XML document, leading to mishandling in a wddx_deserialize call.

Vulnerability Detection Method
Checks if a vulnerable version is present on the target host.
Details: `PHP 7.x < 7.0.18, 7.1.x < 7.1.4 SSRF Security Bypass Vulnerability - Linux`

Product detection result
`cpe:/a:php:php:7.0.17`
`Detected by PHP Detection Consolidation (OID: 1.3.6.1.4.1.25623.1.0.171722)`

Summary
PHP is prone to an unspecified vulnerability.

Quality of Detection (QoD): 30%

. . . continues on next page . . .

. . . continued from previous page . . .

Vulnerability Detection Result

```
Installed version: 7.0.17
Fixed version:     7.0.27
Installation
path / port:       8080/tcp
```

Impact

Successful exploitation will allow attackers to cause segmentation fault.

Solution:

Solution type: VendorFix

Update to version 7.0.27, 7.1.13, 7.2.1 or later.

Affected Software/OS

PHP versions 7.0.x prior to 7.0.27, 7.1.x prior to 7.1.13 and 7.2.x prior to 7.2.1 on Linux.

Vulnerability Insight

The flaw exists due to an inappropriate parsing of HTTP response 'http_header_value' in 'ext/standard/http_fopen_wrapper.c'.

Vulnerability Detection Method

Checks if a vulnerable version is present on the target host.

Details: `PHP 7.x < 7.0.27, 7.1.x < 7.1.13, 7.2.0 Unspecified Vulnerability - Linux`

. . . continued from previous page . . .

Summary
PHP is prone to a heap buffer overflow vulnerability.

Quality of Detection (QoD): 30%

Vulnerability Detection Result

```
Installed version: 7.0.17
Fixed version:     7.0.24
Installation
path / port:       8080/tcp
```

Impact
Successfully exploiting this issue allow attacker to execute arbitrary code with elevated privileges within the context of a privileged process.

Solution:
Solution type: VendorFix
Update to version 5.6.32, 7.0.25, 7.1.11 or later.

Affected Software/OS
PHP prior to version 5.6.32, 7.x prior to 7.0.25 and 7.1.x prior to 7.1.11.

Vulnerability Insight
The flaw exists due to an error in the date extension's 'timelib_meridian' handling of 'front of' and 'back of' directives.

Vulnerability Detection Method
Checks if a vulnerable version is present on the target host.
Details: `PHP < 5.6.32, 7.x < 7.0.24, 7.1.x < 7.1.11 Heap Based Buffer Overflow Vulnerabi.`

NVT: PHP < 5.6.36, 7.x < 7.0.30, 7.1.x < 7.1.17, 7.2.x < 7.2.5 Multiple Vulnerabilities (May 2018) - Linux

Product detection result

```
cpe:/a:php:php:7.0.17
Detected by PHP Detection Consolidation (OID: 1.3.6.1.4.1.25623.1.0.171722)
```

Summary

PHP is prone to multiple vulnerabilities.

Quality of Detection (QoD): 30%

Vulnerability Detection Result

```
Installed version: 7.0.17
Fixed version:     7.0.30
Installation
path / port:       8080/tcp
```

Impact

Successful exploitation will allow an attacker to conduct XSS attacks, crash PHP, conduct denial of service condition and execute arbitrary code in the context of the affected application.

Solution:

Solution type: VendorFix

Update to version 5.6.36, 7.0.30, 7.1.17, 7.2.5 or later.

Affected Software/OS

PHP prior to version 5.6.36, 7.0.x prior to 7.0.30, 7.1.x prior to 7.1.17 and 7.2.x prior to 7.2.5 on Linux.

Vulnerability Insight

The following flaws exist:

. . . continues on next page . . .

. . . continued from previous page . . .

- CVE-2018-10549: Out of bounds read error in 'exif_read_data' function while processing crafted JPG data.
- CVE-2018-10546: An error in stream filter 'convert.iconv' which leads to infinite loop on invalid sequence.
- CVE-2018-10548: An error in the LDAP module of PHP which allows a malicious LDAP server or man-in-the-middle attacker to crash PHP.
- CVE-2018-10547: An error in the 'phar_do_404()' function in 'ext/phar/phar_object.c' script which returns parts of the request unfiltered, leading to another XSS vector. This is due to incomplete fix for CVE-2018-5712.

Vulnerability Detection Method
Checks if a vulnerable version is present on the target host.
Details: `PHP < 5.6.36, 7.x < 7.0.30, 7.1.x < 7.1.17, 7.2.x < 7.2.5 Multiple Vulnerabilit.`

Product detection result
`cpe:/a:php:php:7.0.17`
`Detected by PHP Detection Consolidation (OID: 1.3.6.1.4.1.25623.1.0.171722)`

Summary
PHP is prone to a denial of service (DoS) vulnerability.

Quality of Detection (QoD): 30%

Vulnerability Detection Result

```
Installed version: 7.0.17
Fixed version:     7.2.30
Installation
path / port:       8080/tcp
```

Solution:
Solution type: VendorFix
Update to version 7.2.30, 7.3.17, 7.4.5 or later.

Affected Software/OS
PHP versions prior 7.2.30, 7.3 prior 7.3.17 and 7.4 prior to 7.4.5.

Vulnerability Insight
If 'CHARSET_EBCDIC' is defined (usually, on systems with EBCDIC encoding support), an out-of-bounds read can occur using a malformed url-encoded string.

Vulnerability Detection Method
Checks if a vulnerable version is present on the target host.
Details: `PHP < 7.2.30, 7.3 < 7.3.17, 7.4 < 7.4.5 DoS Vulnerability (Apr 2020) - Linux`

Detected by PHP Detection Consolidation (OID: 1.3.6.1.4.1.25623.1.0.171722)
```

Summary

PHP is prone to multiple vulnerabilities.

Quality of Detection (QoD): 30%

Vulnerability Detection Result

```
Installed version: 7.0.17
Fixed version:     8.1.33
Installation
path / port:       8080/tcp
```

. . . continues on next page . . .

. . . continued from previous page . . .

Solution:
Solution type: VendorFix
Update to version 8.1.33, 8.2.29, 8.3.23, 8.4.10 or later.

Affected Software/OS
PHP versions prior to 8.1.33, 8.2.x prior to 8.2.29, 8.3.x prior to 8.3.23 and 8.4.x prior to 8.4.10.

Vulnerability Insight
The following vulnerabilities exist:
- CVE-2025-1220: Null byte termination in hostnames
- CVE-2025-1735: pgsql extension does not check for errors during escaping
- CVE-2025-6491: NULL pointer dereference in PHP SOAP extension via large XML namespace prefix

Vulnerability Detection Method
Checks if a vulnerable version is present on the target host.
Details: `PHP < 8.1.33, 8.2.x < 8.2.29, 8.3.x < 8.3.23, 8.4.x < 8.4.10 Multiple Vulnerabi.`

NVT: PHP Memory Disclosure Vulnerability - Linux

Product detection result

```
cpe:/a:php:php:7.0.17
Detected by PHP Detection Consolidation (OID: 1.3.6.1.4.1.25623.1.0.171722)
```

Summary

dns_get_record misparses a DNS response, which can allow a hostile DNS server to cause PHP to misuse memcpy, leading to read operations going past the buffer allocated for DNS data. This affects php_parserr in ext/standard/dns.c for DNS_CAA and DNS_ANY queries.

Quality of Detection (QoD): 30%

Vulnerability Detection Result

```
Installed version: 7.0.17
Fixed version:     7.1.26
Installation
path / port:       8080/tcp
```

Solution:
Solution type: VendorFix
Update to version 7.1.26, 7.2.14, 7.3.2 or later.

Affected Software/OS

PHP version 7.x before 7.1.26, 7.2.x before 7.2.14 and 7.3.x before 7.3.2.

Vulnerability Detection Method

Checks if a vulnerable version is present on the target host.
Details: `PHP Memory Disclosure Vulnerability - Linux`

High (CVSS: 7.5)
NVT: PHP Multiple Heap Buffer Overflow and Information Disclosure Vulnerabilities (Aug 2018) - Linux

Product detection result

```
cpe:/a:php:php:7.0.17
Detected by PHP Detection Consolidation (OID: 1.3.6.1.4.1.25623.1.0.171722)
```

Summary

PHP is prone to multiple heap buffer overflow and information disclosure vulnerabilities.

Quality of Detection (QoD): 30%

Vulnerability Detection Result

```
Installed version: 7.0.17
Fixed version:     7.0.31
Installation
path / port:       8080/tcp
```

Impact

Successful exploitation will allow attackers to cause heap overflow, denial of service and disclose sensitive information.

Solution:

Solution type: VendorFix

Update to version 5.6.37, 7.0.31, 7.1.20 or 7.2.8 or later.

Affected Software/OS

. . . continues on next page . . .

. . . continued from previous page . . .

PHP prior to version 5.6.37, 7.x prior to 7.0.31, 7.1.x prior to 7.1.20 and 7.2.x prior to 7.2.8.

Vulnerability Insight
The following flaws exist:
- CVE-2018-14851: exif_process_IFD_in_MAKERNOTE function in exif.c file suffers from improper validation against crafted JPEG files.
- CVE-2018-14883: exif_thumbnail_extract function in exif.c file suffers from improper validation of length of 'ImageInfo->Thumbnail.offset + ImageInfo->Thumbnail.size'
- CVE-2018-15132: linkinfo function on windows doesn't implement openbasedir check.

Vulnerability Detection Method
Checks if a vulnerable version is present on the target host.

[return to 172.31.1.90]

2.1.2 Medium 8080/tcp

Medium (CVSS: 4.8)
NVT: Cleartext Transmission of Sensitive Information via HTTP

Summary
The host / application transmits sensitive information (username, passwords) in cleartext via HTTP.

Quality of Detection (QoD): 80%

Vulnerability Detection Result
`The following input fields were identified (URL:input name):`
`http://adminer42.trabalho_vulnnet:8080/:auth[password]`

Impact
An attacker could use this situation to compromise or eavesdrop on the HTTP communication between the client and the server using a man-in-the-middle attack to get access to sensitive data like usernames or passwords.

Solution:
Solution type: Workaround
Enforce the transmission of sensitive data via an encrypted SSL/TLS connection. Additionally make sure the host / application is redirecting all users to the secured SSL/TLS connection before allowing to input sensitive data into the mentioned functions.

Affected Software/OS
Hosts / applications which doesn't enforce the transmission of sensitive data via an encrypted SSL/TLS connection.

. . . continues on next page . . .

. . . continued from previous page . . .

Vulnerability Detection Method
Evaluate previous collected information and check if the host / application is not enforcing the transmission of sensitive data via an encrypted SSL/TLS connection.
The script is currently checking the following:
- HTTP Basic Authentication (Basic Auth)
- HTTP Forms (e.g. Login) with input field of type 'password'
Details: `Cleartext Transmission of Sensitive Information via HTTP`
OID:1.3.6.1.4.1.25623.1.0.108440

NVT: PHP 5.x < 7.1.20, 7.2.x < 7.2.8, 7.3.0alpha1 < 7.3.0alpha3 DoS Vulnerability - Linux

Product detection result
`cpe:/a:php:php:7.0.17`
`Detected by PHP Detection Consolidation (OID: 1.3.6.1.4.1.25623.1.0.171722)`

Summary
PHP is prone to a denial of service (DoS) vulnerability.

Quality of Detection (QoD): 30%

Vulnerability Detection Result
```
Installed version: 7.0.17
Fixed version:     7.1.20
Installation
path / port:       8080/tcp
```

Impact
Successfully exploitation will allow an attacker to consume 100% of the CPU, and consume disk space with a large volume of error logs, as demonstrated by an attack by a customer of a shared-hosting facility.

Solution:
Solution type: VendorFix
Update to version 7.1.20, 7.2.8, 7.3.0alpha3 or later.

. . . continues on next page . . .

. . . continued from previous page . . .

Affected Software/OS
PHP versions 5.x, 7.0.x, 7.1.x prior to 7.1.20, 7.2.x prior to 7.2.8 and 7.3.x prior to 7.3.0alpha3 on Linux.

Vulnerability Insight
The flaw exists due to the php-fpm master process restarts a child process in an endless loop when using program execution functions with a non-blocking STDIN stream.

Vulnerability Detection Method
Checks if a vulnerable version is present on the target host.
Details: `PHP 5.x < 7.1.20, 7.2.x < 7.2.8, 7.3.0alpha1 < 7.3.0alpha3 DoS Vulnerability - . ↪..`

Product detection result
`cpe:/a:php:php:7.0.17`
`Detected by PHP Detection Consolidation (OID: 1.3.6.1.4.1.25623.1.0.171722)`

Summary
PHP is prone to multiple vulnerabilities.

Quality of Detection (QoD): 30%

. . . continues on next page . . .

. . . continued from previous page . . .

Vulnerability Detection Result

```
Installed version: 7.0.17
Fixed version:     7.0.27
Installation
path / port:       8080/tcp
```

Impact

Successfully exploiting these issues allows attacker to execute arbitrary script code in the browser of an unsuspecting user in the context of the affected site. This may allow the attacker to steal cookie-based authentication credentials and to launch other attacks and will also lead to a denial of service and exhausting the server resources.

Solution:

Solution type: VendorFix

Update to version 5.6.33, 7.0.27, 7.1.13, 7.2.1 or later.

Affected Software/OS

PHP prior to version 5.6.33, 7.0.x prior to 7.0.27, 7.1.x prior to 7.1.13 and 7.2.x prior to 7.2.1.

Vulnerability Insight

The following flaws exist:

- CVE-2018-5712: Input validation error on the PHAR 404 error page via the URI of a request for a .phar file.

- CVE-2018-5711: Integer signedness error in gd_gif_in.c in the GD Graphics Library (aka libgd).

Vulnerability Detection Method

Checks if a vulnerable version is present on the target host.

Details: `PHP < 5.6.33, 7.x < 7.0.27, 7.1.x < 7.1.13, 7.2.x < 7.2.1 Multiple Vulnerabilit.`

Summary
PHP is prone to multiple vulnerabilities.

Quality of Detection (QoD): 30%

Vulnerability Detection Result
```
Installed version: 7.0.17
Fixed version:     7.2.26
Installation
path / port:       8080/tcp
```

Solution:
Solution type: VendorFix
Update to version 7.2.26 or later.

Affected Software/OS
PHP versions before 7.2.26.

Vulnerability Insight
PHP is prone to multiple vulnerabilities:
- Buffer underflow in bc_shift_addsub (CVE-2019-11046)
- DirectoryIterator class silently truncates after a null byte (CVE-2019-11045)
- Use-after-free in exif parsing under memory sanitizer (CVE-2019-11050)
- Heap-buffer-overflow READ in exif (CVE-2019-11047)

Vulnerability Detection Method
Checks if a vulnerable version is present on the target host.
Details: `PHP < 7.2.26 Multiple Vulnerabilities (Dec 2019) - Linux`
OID:1.3.6.1.4.1.25623.1.0.143276

Product detection result
cpe:/a:php:php:7.0.17
Detected by PHP Detection Consolidation (OID: 1.3.6.1.4.1.25623.1.0.171722)

Summary
PHP is prone to two Denial-of-Service vulnerabilities.

Quality of Detection (QoD): 30%

Vulnerability Detection Result
Installed version: 7.0.17
Fixed version: 7.2.31
Installation
path / port: 8080/tcp

Solution:
Solution type: VendorFix

. . . continues on next page . . .

. . . continued from previous page . . .

Update to version 7.2.31, 7.3.18, 7.4.6 or later.

Affected Software/OS
PHP versions prior 7.2.31, 7.3 prior 7.3.18 and 7.4 prior to 7.4.6.

Vulnerability Insight
The following flaws exist:
- Long filenames cause OOM and temp files to not be cleaned
- Long variables in multipart/form-data cause OOM and temp files are not cleaned
leading to a Denial-of-Service condition (CVE-2019-11048).

Vulnerability Detection Method
Checks if a vulnerable version is present on the target host.
Details: `PHP < 7.2.31, 7.3 < 7.3.18, 7.4 < 7.4.6 Multiple DoS Vulnerabilities (May 2020).`

NVT: PHP < 7.4.31, 8.0.x < 8.0.24, 8.1.x < 8.1.11 Security Update - Linux

Product detection result
cpe:/a:php:php:7.0.17
Detected by PHP Detection Consolidation (OID: 1.3.6.1.4.1.25623.1.0.171722)

Summary

. . . continues on next page . . .

. . . continued from previous page . . .

PHP is prone to multiple vulnerabilities.

Quality of Detection (QoD): 30%

Vulnerability Detection Result

```
Installed version: 7.0.17
Fixed version:     7.4.31
Installation
path / port:       8080/tcp
```

Solution:
Solution type: VendorFix
Update to version 7.4.31, 8.0.24, 8.1.11 or later.

Affected Software/OS
PHP versions prior to 7.4.31, 8.0.x prior to 8.0.24 and 8.1.x prior to 8.1.11.

Vulnerability Insight
The following vulnerabilities exist:
- CVE-2022-31628: The phar uncompressor code would recursively uncompress 'quines' gzip files, resulting in an infinite loop.
- CVE-2022-31629: The vulnerability enables network and same-site attackers to set a standard insecure cookie in the victim's browser which is treated as a '__Host-' or '__Secure-' cookie by PHP applications.

Vulnerability Detection Method
Checks if a vulnerable version is present on the target host.
Details: `PHP < 7.4.31, 8.0.x < 8.0.24, 8.1.x < 8.1.11 Security Update - Linux`

Product detection result

```
cpe:/a:php:php:7.0.17
Detected by PHP Detection Consolidation (OID: 1.3.6.1.4.1.25623.1.0.171722)
```

Summary

PHP is prone to a buffer overflow vulnerability.

Quality of Detection (QoD): 30%

Vulnerability Detection Result

```
Installed version: 7.0.17
Fixed version:     8.0.22/8.1.9/8.2.0
Installation
path / port:       8080/tcp
```

Solution:

Solution type: VendorFix

Update to version 8.0.22, 8.1.9, 8.2.0 or later.

Affected Software/OS

PHP versions prior to 8.0.22 and 8.1.x prior to 8.1.9.

Vulnerability Insight

Fixed potential overflow for the builtin server via the PHP_CLI_SERVER_WORKERS environment variable.

Vulnerability Detection Method

. . . continues on next page . . .

Medium (CVSS: 5.8)
NVT: PHP < 8.1.28, 8.2.x < 8.2.18, 8.3.x < 8.3.6 Security Update (GHSA-h746-cjrr-wfmr) - Linux

Product detection result
`cpe:/a:php:php:7.0.17`
`Detected by PHP Detection Consolidation (OID: 1.3.6.1.4.1.25623.1.0.171722)`

Summary
PHP is prone to a vulnerability in password_verify.

. . . continues on next page . . .

. . . continued from previous page . . .

Quality of Detection (QoD): 30%

Vulnerability Detection Result

```
Installed version: 7.0.17
Fixed version:     8.1.28
Installation
path / port:       8080/tcp
```

Solution:
Solution type: VendorFix
Update to version 8.1.28, 8.2.18, 8.3.6 or later.

Affected Software/OS
PHP prior to version 8.1.28, version 8.2.x through 8.2.17 and 8.3.x through 8.3.5.

Vulnerability Insight
If a password stored with password_hash starts with a null byte (\x00), testing a blank string as the password via password_verify will incorrectly return true.
If a user were able to create a password with a leading null byte (unlikely, but syntactically valid), an attacker could trivially compromise the victim's account by attempting to sign in with a blank string.

Vulnerability Detection Method
Checks if a vulnerable version is present on the target host.
Details: `PHP < 8.1.28, 8.2.x < 8.2.18, 8.3.x < 8.3.6 Security Update (GHSA-h746-cjrr-wfm.`

Medium (CVSS: 6.8)
NVT: PHP Heap Use-After-Free Vulnerability (Sep 2019) - Linux

Product detection result
`cpe:/a:php:php:7.0.17`
`Detected by PHP Detection Consolidation (OID: 1.3.6.1.4.1.25623.1.0.171722)`

Summary
PHP is prone to a heap-based use-after-free vulnerability.

Quality of Detection (QoD): 30%

Vulnerability Detection Result

```
Installed version: 7.0.17
Fixed version:     7.1.32
Installation
path / port:       8080/tcp
```

Solution:
Solution type: VendorFix
Update to version 7.1.32 or later.

Affected Software/OS
PHP versions before 7.1.32.

Vulnerability Insight
PHP is prone to a heap use-after-free in pcrelib (cmb).

Vulnerability Detection Method
Checks if a vulnerable version is present on the target host.
Details: `PHP Heap Use-After-Free Vulnerability (Sep 2019) - Linux`
OID:1.3.6.1.4.1.25623.1.0.108635

Product detection result
`cpe:/a:php:php:7.0.17`
`Detected by PHP Detection Consolidation (OID: 1.3.6.1.4.1.25623.1.0.171722)`

Summary
PHP is prone to multiple vulnerabilities.

Quality of Detection (QoD): 30%

Vulnerability Detection Result

```
Installed version: 7.0.17
Fixed version:     7.2.22
Installation
path / port:       8080/tcp
```

Solution:
Solution type: VendorFix
Update to version 7.2.22, 7.3.9 or later.

Affected Software/OS
PHP versions before 7.2.22 and 7.3.x before 7.3.9.

Vulnerability Insight
PHP is prone to multiple vulnerabilities:
- Buffer overflow in zendparse
- Cast to object confuses GC, causes crash
- Exif crash (bus error) due to wrong alignment and invalid cast
- Use-after-free in FPM master event handling

Vulnerability Detection Method
Checks if a vulnerable version is present on the target host.
Details: `PHP Multiple Vulnerabilities (Sep 2019) - Linux`

Medium (CVSS: 4.3)
NVT: Web Server Cross Site Scripting

Summary
The remote web server seems to be vulnerable to a cross-site scripting (XSS) vulnerability.

Quality of Detection (QoD): 50%

Vulnerability Detection Result
`Vulnerable URL: http://adminer42.trabalho_vulnnet:8080/<SCRIPT>foo</SCRIPT>`

Impact
This vulnerability would allow an attacker to make the server present the user with the attacker's JavaScript/HTML code.
Since the content is presented by the server, the user will give it the trust level of the server (for example, the websites banks, shopping centers, etc. would usually be trusted by a user).

Solution:
Solution type: Mitigation
See the references for various background information.

Vulnerability Insight
The vulnerability is caused by the result being returned to the user when a non-existing file is requested (e.g. the result contains script code provided in the request).

Vulnerability Detection Method
Details: `Web Server Cross Site Scripting`
OID:1.3.6.1.4.1.25623.1.0.10815

Low (CVSS: 3.6)
NVT: PHP < 7.2.33, 7.3 < 7.3.21, 7.4 < 7.4.9 DoS Vulnerability (Aug 2020) - Linux

Product detection result
cpe:/a:php:php:7.0.17
Detected by PHP Detection Consolidation (OID: 1.3.6.1.4.1.25623.1.0.171722)

Summary
PHP is prone to a denial of service vulnerability in the phar_parse_zipfile function.

Quality of Detection (QoD): 30%

Vulnerability Detection Result
Installed version: 7.0.17
Fixed version: 7.2.33
Installation
path / port: 8080/tcp

Solution:
Solution type: VendorFix
Update to version 7.2.33, 7.3.21, 7.4.9 or later.

Affected Software/OS
PHP versions prior 7.2.33, 7.3 prior 7.3.21 and 7.4 prior to 7.4.9.

Vulnerability Insight
The phar_parse_zipfile function had use-after-free vulnerability because of mishandling of the actual_alias variable.

Vulnerability Detection Method
Checks if a vulnerable version is present on the target host.
Details: PHP < 7.2.33, 7.3 < 7.3.21, 7.4 < 7.4.9 DoS Vulnerability (Aug 2020) - Linux

2.1.4 Low general/icmp

Low (CVSS: 2.1)
NVT: ICMP Timestamp Reply Information Disclosure

Summary
The remote host responded to an ICMP timestamp request.

Quality of Detection (QoD): 80%

Vulnerability Detection Result
The following response / ICMP packet has been received:
- ICMP Type: 14
- ICMP Code: 0

Impact
This information could theoretically be used to exploit weak time-based random number generators in other services.

Solution:
Solution type: Mitigation

. . . continues on next page . . .

. . . continued from previous page . . .

Various mitigations are possible:
- Disable the support for ICMP timestamp on the remote host completely
- Protect the remote host by a firewall, and block ICMP packets passing through the firewall in either direction (either completely or only for untrusted networks)

Vulnerability Insight
The Timestamp Reply is an ICMP message which replies to a Timestamp message. It consists of the originating timestamp sent by the sender of the Timestamp as well as a receive timestamp and a transmit timestamp.

Vulnerability Detection Method
Sends an ICMP Timestamp (Type 13) request and checks if a Timestamp Reply (Type 14) is received.
Details: `ICMP Timestamp Reply Information Disclosure`
OID:1.3.6.1.4.1.25623.1.0.103190
Version used: `2025-01-21T05:37:33Z`

[return to 172.31.1.90]

2.1.5 Low general/tcp

Low (CVSS: 2.6)
NVT: TCP Timestamps Information Disclosure

Summary
The remote host implements TCP timestamps and therefore allows to compute the uptime.

Quality of Detection (QoD): 80%

Vulnerability Detection Result
```
It was detected that the host implements RFC1323/RFC7323.
The following timestamps were retrieved with a delay of 1 seconds in-between:
Packet 1: 3516743833
Packet 2: 3516744953
```

Impact

. . . continues on next page . . .

. . . continued from previous page . . .

A side effect of this feature is that the uptime of the remote host can sometimes be computed.

Solution:
Solution type: Mitigation
To disable TCP timestamps on linux add the line 'net.ipv4.tcp_timestamps = 0' to /etc/sysctl.conf. Execute 'sysctl -p' to apply the settings at runtime.
To disable TCP timestamps on Windows execute 'netsh int tcp set global timestamps=disabled' Starting with Windows Server 2008 and Vista, the timestamp can not be completely disabled.
The default behavior of the TCP/IP stack on this Systems is to not use the Timestamp options when initiating TCP connections, but use them if the TCP peer that is initiating communication includes them in their synchronize (SYN) segment.
See the references for more information.

Affected Software/OS
TCP implementations that implement RFC1323/RFC7323.

Vulnerability Insight
The remote host implements TCP timestamps, as defined by RFC1323/RFC7323.

Vulnerability Detection Method
Special IP packets are forged and sent with a little delay in between to the target IP. The responses are searched for a timestamps. If found, the timestamps are reported.
Details: `TCP Timestamps Information Disclosure`

Log (CVSS: 0.0)
NVT: Allowed HTTP Methods Enumeration

Summary

Enumerates which HTTP methods are allowed.

Quality of Detection (QoD): 70%

Vulnerability Detection Result

```
The following list contains the URLs and corresponding supported HTTP methods.
URL                                     | HTTP Methods
--------------------------------------------------------------------------------
http://adminer42.trabalho_vulnnet:8080/ | GET,HEAD,POST,PUT,DELETE,OPTIONS,TRACE
```

Solution:

Vulnerability Insight

- Basic HTTP methods: GET, HEAD, POST, PUT, DELETE, CONNECT, OPTIONS, TRACE

. . . continues on next page . . .

. . . continued from previous page . . .

- Extended HTTP methods: ACL, BASELINE-CONTROL, BIND, CHECKIN, CHECKOUT, COPY, LABEL, LINK, LOCK, MERGE, MKACTIVITY, MKCALENDAR, MKCOL, MKREDIRECTREF, MKWORKSPACE, MOVE, ORDERPATCH, PATCH, PRI, PROPFIND, PROPPATCH, REBIND, REPORT, SEARCH, UNBIND, UNCHECKOUT, UNLINK, UNLOCK, UPDATE, UPDATEREDIRECTREF, VERSION-CONTROL

Log Method
Sends multiple HTTP requests and checks the responses.
Disclaimer:
- This enumeration script is provided 'as is' (means no support is given) and only providing rudimentary information about the possible enabled methods
- This script doesn't guarantee completeness or full reliability
For more reliable determination of the enabled HTTP methods please inspect the configuration of the web server manually and directly on the target host.

Log (CVSS: 0.0)
NVT: Web Application Scanning Consolidation / Info Reporting

Summary
The script consolidates and reports various information for web application (formerly called 'CGI') scanning.
This information is based on the following scripts / settings:
- HTTP-Version Detection (OID: 1.3.6.1.4.1.25623.1.0.100034)
- No 404 check (OID: 1.3.6.1.4.1.25623.1.0.10386)
- Web mirroring / webmirror.nasl (OID: 1.3.6.1.4.1.25623.1.0.10662)
- Directory Scanner / DDI_Directory_Scanner.nasl (OID: 1.3.6.1.4.1.25623.1.0.11032)
- The configured 'cgi_path' within the 'Scanner Preferences' of the scan config in use
- The configured 'Enable CGI scanning', 'Enable generic web application scanning' and 'Add historic /scripts and /cgi-bin to directories for CGI scanning' within the 'Global variable settings' of the scan config in use
If you think any of this information is wrong please report it to the referenced community forum.

Quality of Detection (QoD): 80%

Vulnerability Detection Result
```
The Hostname/IP "adminer42.trabalho_vulnnet" was used to access the remote host.
Generic web application scanning is disabled for this host via the "Enable gener
↪ic web application scanning" option within the "Global variable settings" of t
↪he scan config in use.
Requests to this service are done via HTTP/1.1.
This service seems to be able to host PHP scripts.
```

. . . continues on next page . . .

. . . continued from previous page . . .

```
This service seems to be able to host ASP scripts.
The User-Agent "Mozilla/5.0 [en] (X11, U; OpenVAS-VT <version replaced>)" was us
↪ed to access the remote host.
Historic /scripts and /cgi-bin are not added to the directories used for web app
↪lication scanning. You can enable this again with the "Add historic /scripts a
↪nd /cgi-bin to directories for CGI scanning" option within the "Global variabl
↪e settings" of the scan config in use.
The following directories were used for web application scanning:
http://adminer42.trabalho_vulnnet:8080/
While this is not, in and of itself, a bug, you should manually inspect these di
↪rectories to ensure that they are in compliance with company security standard
↪s
The following CGIs were discovered:
Syntax : cginame (arguments [default value])
http://adminer42.trabalho_vulnnet:8080/ (file [default.css] version [4.2.5] auth
↪[db] [] auth[username] [] auth[password] [] auth[permanent] [1] auth[driver] [
↪] auth[server] [db] )
```

Log (CVSS: 0.0)
NVT: Traceroute

Summary
Collect information about the network route and network distance between the scanner host and the target host.

Quality of Detection (QoD): 80%

Vulnerability Detection Result
```
Network route from scanner (172.30.0.2) to target (172.31.1.90):
172.30.0.2
172.31.1.90
Network distance between scanner and target: 2
```

Solution:

Vulnerability Insight
For internal networks, the distances are usually small, often less than 4 hosts between scanner and target. For public targets the distance is greater and might be 10 hosts or more.

Log Method
A combination of the protocols ICMP and TCP is used to determine the route. This method is applicable for IPv4 only and it is also known as 'traceroute'.
Details: `Traceroute`
